Description :
A Social-Website which will allow users to interact with other peoples.
This will allow users to post their photos and have likes and comments by other users .
On the base of Popularity of the photos. The users will be awarded to win the contest.
It is quite familiar to Hapramp and Instagram.

Front-end is a website for users to interact with the database easily.
The Database used is Mongo DB .

Technology Used:
● HTML
● CSS
● BOOTSTRAP
● NODE JS
● Express js
● JAVASCRIPT
● MONGODB

Points :
1. Open the Folder and run **node app.js** in command line .
2. Open the webpage type out the url "**localhost:3000**".
3. Coming on the Landing page of the Website proceed further
4. There are Posts which our users have made .
5. For Liking or commenting a post you must be logged in .
6. Create Account through Sign Up.
7. Provide the necessary details .
8. Now You can Like , Comment or make a post of your own .
9. The Posts are saved on Cloudinary.com and a URL is generated from there which is inserted in the mongo databases.
10. The user who have made a post can edit its post .

11. Similarly the user who have liked a post or commented a post can edit only the activities performed from his / her account.
12. There are two Contest :
    a. Most Appreciated Post
    b. Most Commented Post
13. Even User Profiles can be viewed which have their own post .
14. Even if the user is bored , then he can visit Our Gaming Zone :
    a. TipTip : User have to just press the key [a to z only] and have a look at the display and sounded effects made .
    b. Color Game : Test Your RGB mixture Skills .
